illume Sky Lighting System

Picture this. You are working out in the gym located in the basement level of a shopping centre and looking up to see a bright cloudy sky. illume Sky is a modular system that can be tailored to fit almost any room to recreate the appearance of the sky outside.

Based on the award winning illume Skylight Alternative, illume Sky takes lighting to the next level by enabling that al fresco sense of space and calm within enclosed spaces.

illume Sky is perfect for spaces such as children's nurseries/daycare centres, gyms, dental surgeries, aged care facilities, large retail complexes and commercial buildings. With our illume Ambient Light Technology (A.L.T) it brings ambience not unlike day lighting into multi-storey residential buildings, to brighten a basement, child's play room, or can enhance serenity within patient and palliative care environments in the health services industry.

ADVANTAGES OF AN ILLUME SYSTEM

- ✓ Does not affect insulation (R-value) or noise rating (NCR)
- ✓ Can be installed almost anywhere
- ✓ No major roof alteration required
- ✓ Fully sealed unit - will not leak or collect bugs
- ✓ Does not transfer UV, heat or noise indoors

illume Sky does not provide natural light

FEATURES

- Modular and scalable - can be tailored to fit your project
- Suitable for standard plaster and suspended ceilings
- Operates on mains power like a conventional light fitting
- Available in 600x600mm square panels
- Other sizes such as 600x900, 300x1200 and 600x1200mm available upon request

KIT INCLUDES

- illume Sky light panel
- Power supply module
- Power distribution module
- Light panel control module
